4 June 1963

MEMORANDUM FOR : Chief, Operations Division, CSA

SUBJECT : A-12 Viewfinder "Slewing" Capability

REFERENCE : A. [REDACTED] (IN 77534)  
B. Memo OXC 5004 dated 27 May 1963

1. The A-12 viewfinder covers a larger area than the viewfinder in the research vehicle, however, it does scan a considerable area immediately below and aft of the A-12. It is felt that an easier and more useable solution to the problem stated in Ref. A would be to shift the optics to an increased forward position by about 2° which will give approximately 40 miles of additional forward scan area at operational altitude.

2. [REDACTED] will visit and discuss this solution with [REDACTED] on 6 June. Results of this meeting will be reported to Operations.
